Decision Mathematics is part of the much wider area of mathematics referred to as Discrete Mathematics. In continuous mathematics, the real number system is used in its entirety. Discrete mathematics uses integers and rational numbers. In continuous mathematics, the quantities are found by measurement.

- Starting with A, divide by 2, discarding any fractions, until there is nothing left to divide. Write the series of results under A.
- Starting with B, keep doubling until you have doubled it as many times as you divided the first number. Write the series of results under B.
- Add up all the numbers in the B-column that are

Introduction to Decision Mathematics

Decision Mathematics. Operational Research (O.R.) is the discipline of applying advanced analytical methods to help make better decisions. The O.R. approach often involves constructing and using mathematical models and problem structuring methods to represent the wide range of problems faced by organisations.

D2: Decision Mathematics 2 In D2 you look at more problems that involve decision making. We will learn how to transport things with the minimum cost, how to ensure that traffic flows at the best rate and how Mathematics can help to make a strategy for playing games. All this, and the famous Simplex Algorithm.

Discrete mathematics is the study of mathematical structures that are fundamentally discrete rather than continuous. In contrast to real numbers that have the property of varying "smoothly", the objects studied in discrete mathematics – such as integers, graphs, and statements in logic – do not vary smoothly in this way, but have distinct, separated values. Discrete mathematics therefore excludes topics in "continuous mathematics" such as calculus or Euclidean geometry. Discrete objects ...

The pay-off matrix shows that if B adopts strategy Y then the pay-off for A will be 2 by using strategy W and 5 using strategy X. On the other hand, if B adopts strategy Z then the pay-off for A will be 02 using strategy W and 04 using strategy X. The idea is that neither player knows in advance which strategy the other will use.
