All ZF control systems use either 12 or  
24 VDC supplied power. For applications  
using electronic shift, the input voltage  
to the processor must be equivalent to  
the voltage required by the shift  
solenoid. The maximum power  
requirement while driving a servo for  
mechanical actuation is 160 Watts.

Switching modes from Reverse to Parking or Drive is only necessary when the car was completely stopped. Many car owners are not waiting for a stop of the car and switch gears, which in turn leads to the failure of the transmission. Sometimes gear support bearings were destroyed. In this case it is needed to rebuild ZF 4HP22 problems.

This list of ZF transmissions details those automotive transmissions created by the German ZF Friedrichshafen AG engineering company. There are two fundamental types of motor vehicle transmission: Manual – the driver has to perform each gear change Automatic – once placed in drive, it selects the gear ratio dependent on engine speed and load automatically. Furthermore, they may also be manufactured solely as a gearbox, and use an entirely separate final drive unit – or be supplied as a ...

Like most of automatic gearboxes from German company ZF model 5HP19 differs by durability and increased reliability. It should be noted that this model is extremely critical to oil starvation. Defective solenoids or oil leak from gasket are able in a substantial way to reduce the pressure in the network that in its turn leads to problems with lubricant and transmission overheating.
